**Specification, Benefits,  
Designs Ideas & More!**

**Prime Floors**

OFFICIAL FLOORING PARTNER  
OF THE U.S. GLOBAL SERVICES

## What is SPC Floorings?

S

**Stone**

P

**Polymer**

C

**Composite**

**SPC is 100% waterproof, designed to install over uneven sub-floors, the most realistic wood-looks with embossed textures, and extremely durable.**

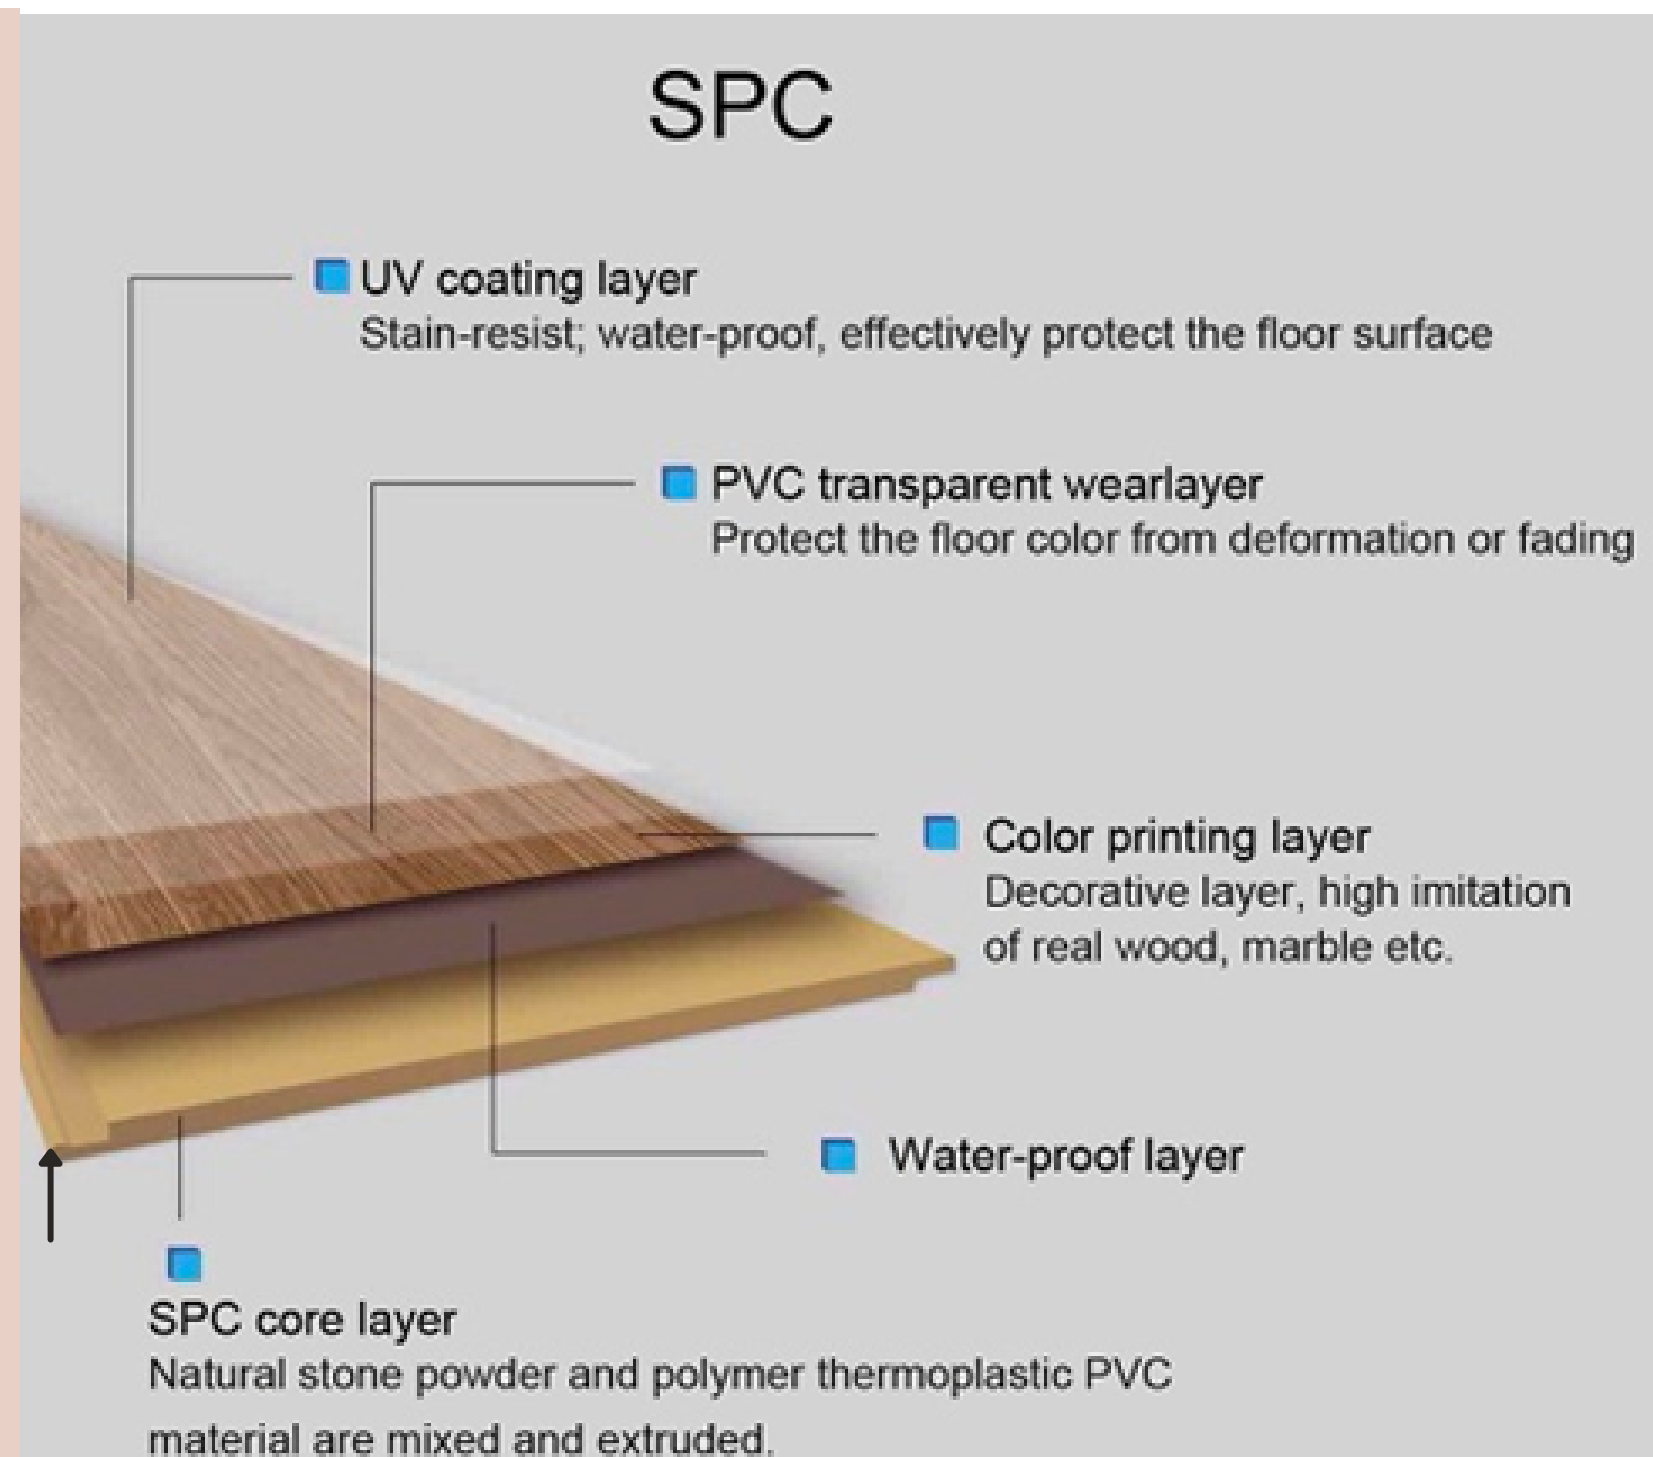

**Its signature rigid core is highly sturdy, making it an ideal choice for high-traffic and commercial environments.**

---

*Novel flooring Innovation*

# What's in the core of your floor?

## Layers of SPC Floor

- ✓ **Backing Layer**  
The backbone of the SPC Plank
- ✓ **The Core**  
It contains a solid, waterproof core. It won't ripple, swell or peel no matter much liquid you subject it to.
- ✓ **Printed Vinyl Layer**  
This is where you get your gorgeous photo imagery that makes the vinyl look identical to natural materials like stone and wood.
- ✓ **Wear Layer**  
The wear layer is like your bodyguard; it helps protect your floor from dents, scratches, etc.

# Benefits of SPC Flooring

Waterproof

**Check for any uneven surface or cracks. You may want to fill up cracks with cement-based patches.**

# Installation Guidelines

**Minimal Prepration**

**Click N Lock technology**

**No Glue**

# Why choose SPC Flooring against Engineered Wood Flooring

The Engineered Wood Flooring have low water and moisture resistance. which can be temporarily stagnant on the surface of the Engineered Wood Flooring.

The Engineered Wood Flooring can be swollen if the water and the moisture get into the jointing of each piece of the floor. Consequently, it can be tipped at the jointing of each piece of the floor.

The SPC Flooring can resist the water and the moisture for 100% because of the main component of the material is the PVC.
